

True Lubrication-Free Air Tools Now Available from Jiffy Tool!

Jiffy has revolutionized our product offering with the development of a proprietary process that greatly reduces friction to the moving parts of our motors. With the reduction of friction, benefits include a reduction of heat and reduced component wear. This process also increases the oxidation resistance of the metal.

In addition to a friction reduction process, we are utilizing ceramic bearings and composite blade material, which completely eliminates the need for lubrication.

With these New Jiffy Tools, it is now possible to obtain the same performance as a lubricated tool but without the possibility of oil mist in the work area and possible work surface contamination from oil. The Gear train will continue to require grease lubrication.

Please review our Lubrication Free catalog and discuss with your Jiffy Sales Representative.
